MOVABLE SOUNDPROOF WALLS

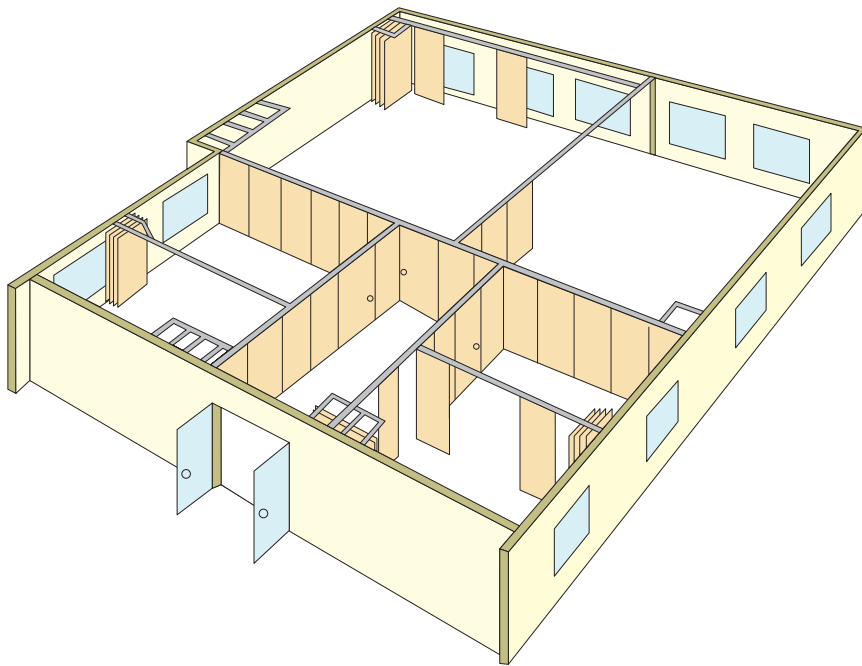

movable soundproof walls

The Movable Soundproof Walls are the best proposition for creating multi-functional areas. Our experience in the sector of special constructions, as well as the high quality materials that we use, guarantee excellent elegant and functional results.

The Movable Soundproof Walls are not only the most flexible solution for the dividing of internal spaces, but also a special elegant proposition, which can be accomplished by the choice of the suitable colour for final finishing.

multiple options of area formation

The Movable Walls have the ability to convert internal spaces to any size and space, according to the special needs of each area.

In this way, we can accomplish the dividing of large areas (hotels, conference centers, offices) in smaller rooms, in order to correspond totally to the predefined customers' demands.

The restoration of the space to its previous condition is immediate, when needed.

unique function

The system provides the capability of fitting in a swing door on any panel is required.

simple to use

The Movable Walls are very easy to use and especially at opening and moving the panels to create the desired space.

Each panel is also easily secured in its' position and fits perfectly with the rest, giving the sense of a wall with sleek design.

without digging or floor guide

Digging and making holes in the floor are unnecessary.

The system does not have a floor guide channel.

The smooth movement of the system is accomplished by the installation of aluminum rails only at the upper part of the partitions.

specifications

soundproof

One of the basic features of the Movable Walls is the sound proofing which they provide.

The elimination of noise can reach 45dB, depending on the kind of construction and the special needs of each space.

thermal proof

They also provide thermal proofing more effective than a simple permanent wall, saving energy, heating and cooling.

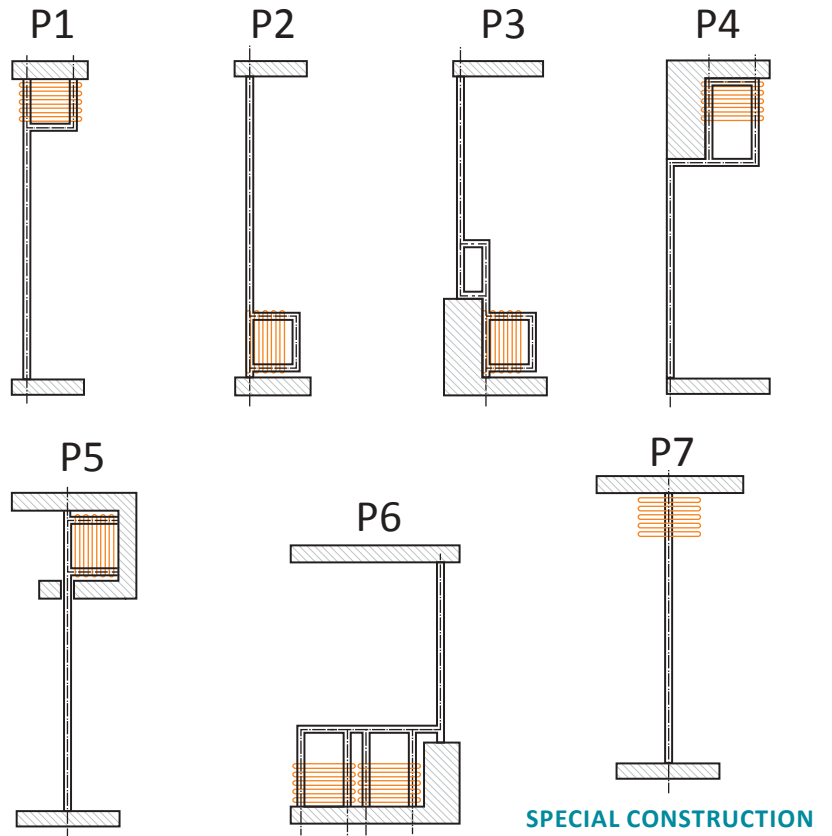

fire resistance

Moreover the Movable Walls provide some kind of protection against fire, by delaying its spreading in or out the area.

Non certified fire proof resistance.

parking area

The movable panels of the system can be easily stored in a specially designed area (parking area) in any place required, using the less possible space.

unlimited applications

Our company can provide the design and installation of the movable walls, according to the special requirements of your space.

technical features

The panels fit precisely to each other by the use of male and female profiles on their vertical sides. The securing positioning firmly is achieved by the easy use of a special crank.

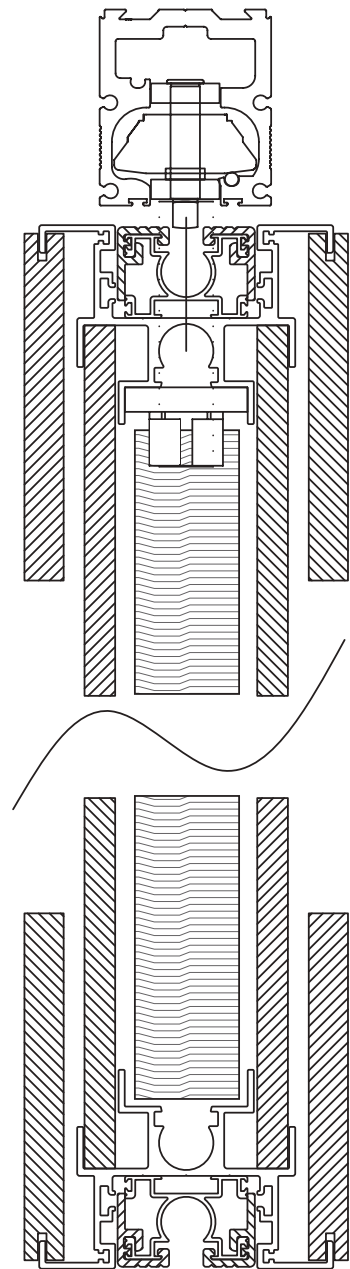

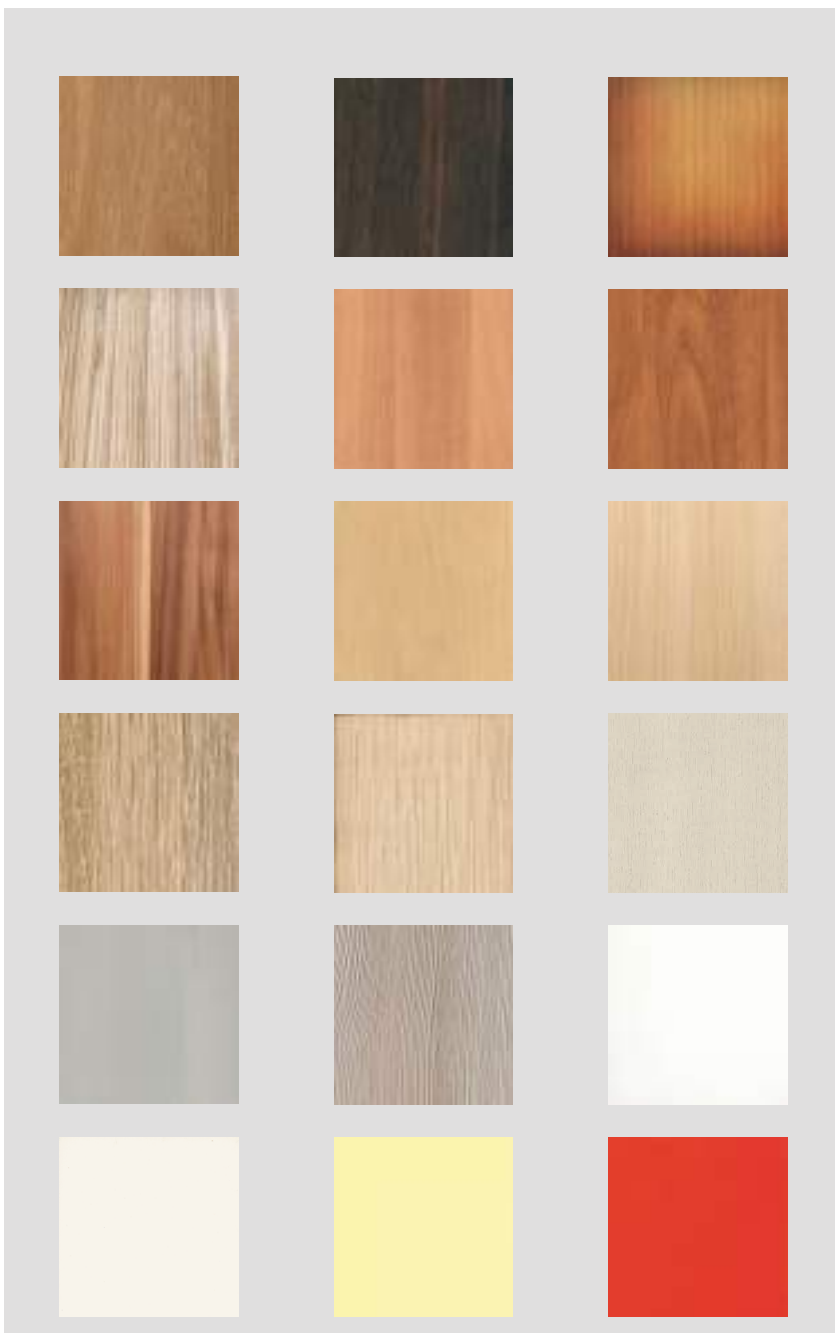

service

The Movable Walls are designed and installed by specialized staff of our company, according to the highest standards. The panels are made of high quality materials, offering a perfect functional and elegant result.

melamine

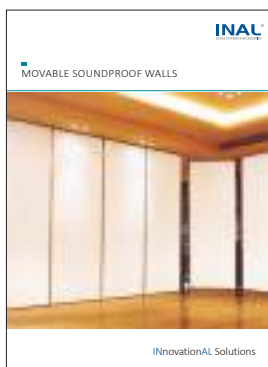

For the lining of the soundproof panels INTERMETAL S.A. cooperates with industries which are specialized in wood and can provide melamine series in a wide range of colors and patterns, monochrome, wood imitation designs with high endurance.

Beside the big colour variety which can be used as outside cover at the panels, there is also an extensive variety of materials and designs that can be used instead of wood.

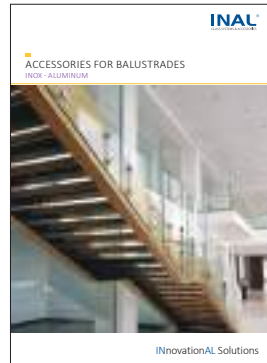

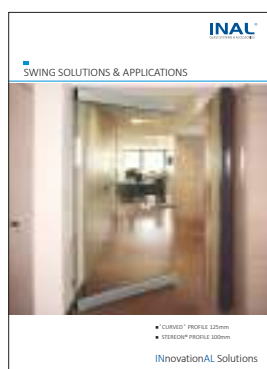

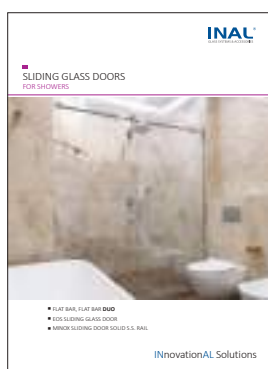

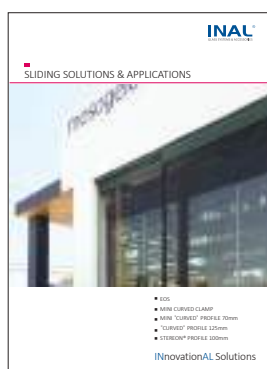

The special heavy duty rollers, which are placed on the upper side of each panel, allow the use of the system from both sides, from any side of the area we desire.
